Certificate**

SITE DEVELOPMENT

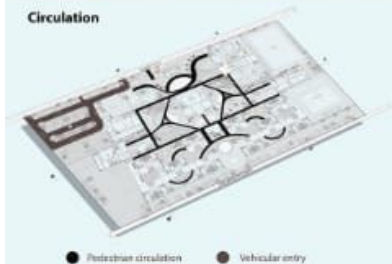

Buildings

Open spaces

Circulation

● Pedestrian circulation ● Vehicular entry

Vegetation & water bodies

● Water features ● Vegetation

Project type: Drug rehabilitation centre.
Location: Tarantaran, Punjab, India.
Site Area: 25,000 sqm.(6.23 Acres).

Site dynamics

The site plan is a culmination of all the programmes scattered in an orderly fashion by connecting two functions with a transitional activity. Every built space has a relation to the unbuilt and is the pre-experiential space before entering into the built space. The spaces continuously transforms its character from open to semi-open to close and the user travels along the site. The planning of all the functions are placed along a central loop with therapy garden hence the user cannot get lost anywhere and will always open up in the central garden area. Open spaces between two spaces at the edges of the site to provide private courts for specific activities which also acts as a merging catalyst with the neighbourhood fields.
